

### *Table Maintenance Extension*

The Table Maintenance extension provides tools for manipulating relational database tables from a Web page. With this extension installed, Web site users can delete or combine database table rows and retrieve binary large objects (BLOB's) such as multimedia files.

**Business Case:** Database-driven Web sites are becoming the norm, not the exception. While other content management systems offer tools for end-users to author and manage static content, modifying the database tables that derive much of the dynamic content is still a programmatic task for technical developers. In order to enable knowledge workers to maintain dynamic content, the Table Maintenance extension provides tools so that content editors can manage dynamic information from a Web-based form.

Features	Benefits
Web-form based database table maintenance	No SQL or programming experience required for deleting or combining database table rows.
Supports binary large objects (BLOB's)	Manage large multimedia files such as audio, video and animation.

InterLoom Objects	Functions
Database File Viewer	Retrieves a file from database and displays its contents.

InterLoom Beans	Functions
Database MultiRow Saver	Saves multiple rows in a database table.
Database Row Deleter	Deletes a row from a database table based on a supplied where clause.
